Read This First! How To Choose Simple VPN Client For Windows With No-Logs Guarantee

There's a chance you'll get some world-wide web access at your hotel, but the government will definitely monitor it. There's no saying if you'll get kicked off the web or face any charges if you try to use a VPN that way. The usual way countries ban VPNs is blocking access to VPN providers' websites.

The land of the free and brave has not gotten round to banning VPN services yet. However, it has managed to coerce or force some service providers in the past to hand over user data. That's why it's best to be aware of what jurisdiction a VPN service provider is in before signing up with them. That being said, this law is virtually unenforceable since it would require that the country block or make illegal access to websites which use SSL. That would mean that technically, the majority of the world wide web would be illegal to access in Oman.

North Korea — Since the country runs its own intranet, it's pretty obvious locals can't use VPNs in the country. The government bans all foreign media, after all, so allowing access to VPNs wouldn't be in their interest. You might be able to use a VPN as a tourist, though that's not a guarantee.

Having a VPN can be beneficial depending on why you want to be invisible online. VPNs can protect you but can also be used to do something illegal on the internet. As organizations have ramped up efforts to block VPN access which bypasses their firewalls, VPN providers have responded by utilizing more

sophisticated techniques to make their connections less conspicuous. As you might be able to tell by now, the list of countries which ban the use of VPNs isn't very long and consists mainly of countries which impose high levels of censorship. In most cases, it is obvious that the ban arises from a governmental desire to control the narrative or impede access to the outside world.

They might also force ISPs to block network ports that some VPN protocols use (like TCP port 1701 and UDP ports [best vpn](#) 500, 4500, and 1701 for L2TP/IPSec). It's hardly surprising that VPN legality is a grey area in a country like China.

The country pretty much forces VPN providers to gain government approval to work in the country. Typically, countries with controlling laws such as Iran, North Korea and China have outlawed or restricted the use of Virtual Private Networks. Some countries do not want their citizens to access banned websites such as Netflix, Hulu, Facebook and Twitter. Authorities in these countries want to monitor online movements made by citizens who are considered as dissidents.
