Chrome Remote Desktop is a Browsers and Plugins application like Shockwave, Polarity, and Whale from Google.

How To Use Chrome Remote Desktop To

Access Another Computer Easily

Google says that "all remote desktop sessions are fully encrypted" and no one, not even Google, can have access. Combined with the fact that we need a PIN to connect to remote devices, we can be reasonably protected. To increase protection, use the longest and most secure PIN keys if possible. It should be mentioned that the unique codes generated when connecting to a third party's computer expire after five minutes and this prevents old PINs from being used in the future. You can install Chrome Remote Desktop for iOS and Android.
